Steps to be followed:

1. Create a repository on github and clone in your PC

2. Navigate to that folder in the terminal

3. Make a file named app.py

4. Make a file named Procfile and paste this

```
web: sh setup.sh && streamlit run app.py
```

5. Make a file named requirements.txt

6. Make a file named setup.sh and paste this

```
mkdir -p ~/.streamlit/

echo "\
[server]\n\
headless = true\n\
port = $PORT\n\
enableCORS = false\n\
\n\
" > ~/.streamlit/config.toml
```

7. heroku login

   heroku create

   git add .

   git commit -m "Some message"

   git push heroku master
